

The innovative radio-controlled door locking solution

The electromechanical multipoint locking system, locks and unlocks doors, conveniently and securely : via radio-controlled remote control - **without keys**.

The radio receiver is located in the door-leaf under the drive unit. Highest security level is ensured by means of 66-bit coding. Up to a maximum of 98 fobs for each MV E500F lock can be installed.

The powerful motor, tightly closes and locks the main entrance door for maximum security and minimises loss of energy.

MV E500F is the perfect solution to automate lever-handle or cylinder-operated locking systems.

Because the MV E500F fits all standard faceplate widths and the fact that the main lock as well as the strikers are designed for standard doors, the system is suitable for every main entrance door UPVC or wood.

The radio-controlled range is unique as it can be adjusted for various operational ranges.
