

KEY LESS ENTRY SYSTEM FOR
ALLOWING AURTHORISED ENTRY INTO
BUILDINGS VIA A MOBILE PHONE

The Technik2 keyless system, uses the mobile phone network to allow up to 2 pre-loaded phone numbers to open a door . The system uses a GSM unit but by only allowing pre-programmed numbers to dial in, there are no call charge. The unit will be able to send SMS to the pre-programmed numbers to alert of an emergency such as gas / water leak or panic button pressed. Coded SMS can be sent to the unit from any phone to control functions. Aimed at the disabled, elderly, social housing, landlords and domestic use.

This product is unique and novel, due to the stand alone unit, being able to interface with any normally open contact operated door entry system. Systems can be installed in the elderly, disabled. Allowing carers to open the door and even talk and listen to a building from there mobile phone. Automated text messages can be sent to the carers if set conditions are not maintained.
