

The radio-controlled, battery operated door locking solution

CENTRALOCK is a very simple to use, battery operated door entry system. It is installed on the inside of your door and fits most multipoint locks. Up to 8 remote key fobs can be programmed into the unit.

The radio code uses 1.3 billion rolling codes and is very secure and cannot be scanned or copied.

Batteries last on average 18 months - 2 years and gives approx. 1 months notice of low battery.

To lock - just lift the door handle, to unlock - press the door button on the remote fob.

ADVANTAGES

Convenience, just press the door open button as you walk to the door and it unlocks.

After 20 seconds from unlock the door is in day-latch and cannot be opened from the outside without a key fob.

There is a manual override and visual indicator on the inside door handle

High security encoded codes.

No outside cylinder to pick, drill or attack.

Uses your existing multipoint lock.

No keys! Easy to use by elderly or disabled.
